

As an inventor, I strive to create things that improve lives. The newest product which I believe is going to change how we build case good furniture such as tables, dressers, wall units, pantries, entertainment centers,,,,,, furniture that can last for centuries --- unlike the disposable furniture being promoted by some multi-international Corporations emphasizing the design but not the integrity of the material used to construct the furniture I believe It should be easy to take apart, and put back together by a novice without the worry of damaging it, It has to both sturdy and lightweight to move around, Most importantly is a long lasting beautiful design ----simple , functional and elegant,

Newly invented Sing honeycomb panel is available in 6 different lengths, It is interchangeable able to build almost any case goods that you need for your home, We encourage you to try it for 90 days with full money back guarantee if you think we are not what we claim as strongest, lightweight affordable function as good as you can expect, during the try out time. We'd like you to compare with furniture sold by [www,boconcept.com](http://www.boconcept.com) [westelm.com](http://westelm.com). [temahome.com](http://temahome.com) and Ikea. They have a line of lightweight furniture which is made of paper honeycomb,

The difference is the patented Sing honeycomb core is made of clean environmentally friendly wood veneer instead of paper which takes more energy and chemicals to process. It is the strongest lightweight material at a very low cost, ever invented,

Please check our web sites to learn about this wonderful invention. please forward it to your friends if you like what you see.

Thank you from inventor Peter Sing.
